

# X-Rev 5W-30 Lubricant

Ever since switching from Shell to X-Rev 5W-30, I noticed my engine is a lot smoother especially during acceleration and the rpm needle goes up & down a lot faster than normal. The car is a lot quieter at highway cruising speeds with the engines 'purring' quietly while at constant speed of about 110km/h. I also felt the car displayed an increased in torque and power, whenever I dropped gear, the pull is a lot stronger with the engine being a lot more responsive. Overall, the X-Rev 5W-30 is a good oil with additives included whereas the others I will still need to put in additives on my own.

- Royston Yeo, Honda Euro-Accord R

My engine became a lot smoother and more responsive with the rpm needle jumping eagerly into the red. On top of that engine roar was also minimized to a whisper! I monitored my oil temperature for the next few weeks after that and surprisingly it hovered just about the 90-degree mark, previously it recorded approximately 110-degrees during expressway runs. Not only does X-Rev keep my engine running smoother it also keeps it a lot cooler too which is a plus point in my book.

- Jackson Toh, Hyundai Getz

Imagine my surprise when I tabulated my total mileage after using X-Rev's 5W-30 motoring oil and discovered I did a good 50km more per tank of petrol I pumped! X-Rev also gave me renewed confidence in my car as my engine is now a lot more

willing to rev into the higher rpms. For me I value comfort and minimal noise intrusions and X-Rev made my ride that much more quieter!

- Kelvin Lee, Toyota Rush
